

PB 29 Ultramarine Blue

Main Characteristics:

- Sodium Aluminum Sulfosilicate
 $Na_{8x}[(Al,Si)_{12}O_{24}(S)_y]_2$
- Pigment Blue 29 (C.I. 77007)
- Unique reddish blue shade
- Excellent ability to make whites “whiter”, greys bluer and blacks “jetter/deeper”
- Ease of dispersion
- Semitransparent to visible light, transparent to NIR (“cool pigment”, but its cool performance will be highly dependent on substrate and formulation)

Heat fastness	350oC, 5 min
Light fastness	Excellent
Weather fastness	Excellent
Acid fastness	Low
Alkali fastness	Excellent
Cement compatibility	Low
Solvent fastness	Excellent

Designed for Various Applications

Ultramarine pigments (Pigment Blue 29) are based on the natural mineral china clay and do not contain heavy metals in their chemical constitution. They are characterised by their very bright and brilliant medium to red-tinted blue shades and offer very good light resistance as well as resistance to alkalis.

Company offer

Specifically modified qualities

Sofitel LLC offers a standard range of ultramarine blue pigments that covers most applications. In addition to the standard types, Sofitel LLC also offers an abundance of individual ultramarine blue pigments tailored to the requests of our customers.

Professionalism and sustainability

As a young JV company, we place the good product quality and customer satisfaction above all. Creating a strong, reliable and advanced customer network all around the globe is our company’s mission.
